Data Analyst

Faisalabad, Pakistan | +92 325 0349009 | rizwan.202202811@gcuf.edu.pk | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst with a BS in Data Analytics from Government College University Faisalabad (GCUF), focused on turning raw data into clear business decisions through Python, SQL, Power BI and Tableau. Seeking an on-site or office-based Data Analyst role where I can apply my analytical and data visualization skills.

SKILLS

Core: Python, SQL, Power BI, Tableau, Excel

Python Libraries: Pandas, NumPy, Matplotlib, Seaborn, Plotly, Streamlit

Additional: R, R Shiny, MySQL, SPSS, ArcGIS

PROJECTS

Retail Sales Analysis & Visualization | *Python, Pandas, Matplotlib, Seaborn*

- Analyzed 1,800+ retail transaction records to identify which categories and regions drove sales performance.
- Engineered time-based features (month, quarter, day of week) to reveal seasonal demand patterns that inform inventory and staffing decisions.
- Delivered visual comparisons of category and regional performance to support business reporting.

Customer Shopping Sales Dashboard | *Tableau*

- Built an interactive dashboard covering \$2.7M in sales across 1,014 invoices and 3,075 units, enabling faster sales performance reviews.
- Identified the top-performing mall, category, and a 58% female customer contribution, informing where to focus marketing spend.

HR Analytics Dashboard | *Tableau*

- Built a workforce dashboard covering 1,470 employees, surfacing a 16.12% overall attrition rate for leadership visibility.
- Broke down attrition by department, job role, age group and job satisfaction to help HR target retention efforts where they matter most.

Loan Risk Analysis | *Python, Pandas, Seaborn*

- Caught and corrected data quality issues, including a negative loan amount, before they could distort the analysis.
- Engineered a Debt-to-Income (DTI) ratio and risk category to test what actually predicts loan default.
- Found default rates were similar across risk categories, showing credit score alone is not a reliable predictor—a finding relevant to underwriting decisions.

DataMate AI — Final Year Project (Team Project) | *Python, Streamlit, Scikit-learn*

- Co-built a no-code data analytics platform (upload, clean, explore, visualize, AutoML) so non-technical users can analyze their own data.
- Validated the platform against 10 public datasets under faculty supervision at GCUF.

EDUCATION

BS Data Analytics — Government College University Faisalabad (GCUF) | 2022–2026

CERTIFICATIONS & ADDITIONAL EDUCATION

Data Analytics and Business Intelligence — DigiSkills.pk | 2026

Issued under: Ministry of IT & Telecom / Ignite / Virtual University

Diploma in Information Technology (DIT) — Government College of Management Sciences Khar, District Bajaur | 2020–2021

One-Year Diploma in Information Technology | Certificate dated 31 August 2021
